

Team 02 – ResuMind AI

Converting unstructured PDF documents into structured, machine-readable JSON data using intelligent AI processing, Enables automated resume screening, precise skills matching, and candidate evaluation at scale.

Meet Our Team

ResuMind AI brings together six specialized modules, each designed to handle a critical stage in the resume processing pipeline. From initial file upload to final validation, every team member ensures data quality and accuracy.

Sayali

Ranking Engine

Akanksha

Strategic growth plan

Pratik

Data Transformation & AWS Deployment.

Divya

PDF Report Export.

Vikrant

LLM Processing & JD URL Fetching.

Umaina

Insights, Technical Gaps.

User Upload & Ranking (Sayali & Divya)

Key Features

- User Upload: Manages initial file reception and converts documents into binary streams for processing.
- Candidate Ranking: Implements algorithmic scoring to rank candidates based on job compatibility.
- Report Export: Developed the functionality to export processed intelligence into a professional PDF format.

AWS Deployment Architecture

Data Transformation & AWS Deployment (Pratik)

PDF to Text: We've used PDFPlumber to convert PDF into text.

Normalization & Cleaning: We've cleaned the extracted text, remove unwanted formatting, and prepared it for AI processing.

AWS Deployment

We deployed the frontend on S3, the backend on EC2, and used CloudFront to provide secure HTTPS access and handle user requests.

JD Intelligence & Extraction (Vikrant)

- URL JD Fetching:** Developed a specialized module to scrape and fetch job descriptions directly from careers URLs.
- LLM Processing:** Uses large language models with specialized prompts to transform unstructured text into clean JSON.
- Entity Extraction:** Automatically identifies names, skills, experience, and contact information.

CANDIDATE

RECRUITER

✓ EDGE FACTORS

- 1 B. Tech in Cyber Security relevant.
- 2 GitHub and Docker for secure development.
- 3 Adaptability and team collaboration skills.
- 4 Strong communication and listening abilities.

✗ TECHNICAL GAPS

- 1 MINIMUM THREE YEARS INFORMATION SECURITY EXPERIENCE.
- 2 CLOUD SECURITY EXPERIENCE (AZURE/AWS SECURITY).
- 3 KNOWLEDGE OF ISO 27001 OR NIST 800-32.
- 4 EXPERIENCE WITH IAM, SIEM, AND ENCRYPTION.

Technical Gaps & Edge Factors (Umaina)

•**Technical Gaps:** Identifies specific skill deficiencies by comparing candidate resumes against job requirements.

•**Edge Factors:** Highlights unique candidate strengths and "extra" skills that provide a competitive advantage.

•**Schema Validation:** Final quality gate checking data against strict structures to ensure production-ready output

Strategic Growth Plan (Akanksha)

Personalized Paths

Generates tailored learning journeys based on identified technical gaps.

Neural Search Integration

Connects users to specific study materials, such as AWS certifications, NIST frameworks, or CEH training.

Actionable Intelligence

Provides a roadmap for candidates to achieve "AI-ready" status for their target roles.

Thank You !
