

Team 02 – ResuMind AI

Converting unstructured PDF documents into structured, machine-readable JSON data using intelligent AI processing, Enables automated resume screening, precise skills matching, and candidate evaluation at scale.

Meet Our Team

ResuMind AI brings together six specialized modules, each designed to handle a critical stage in the resume processing pipeline. From initial file upload to final validation, every team member ensures data quality and accuracy.

Umaina

Recruiter Portal(UI/UX).

Pratik

AWS Deployment

Akanksha

Vikrant

API Integration & System Flow

Sayali

Ranking Engine

Architecture

Work Done Till Now

Recruiter Portal (Umaina)

Key Features

- Built recruiter dashboard interface
- Created JD input and viewing system
- Displayed matched candidates with scores

Database & Matching Logic (Akanksha)

Designed and managed SQLite database.

Implemented CRUD operations.

Developed matching logic for JD vs candidate skills.

API Integration & System Flow (Vikrant)

- Developed APIs for frontend-backend connection
- Managed data flow and responses
- Integrated complete system for smooth operation

Resume Parsing

Improve resume parsing accuracy for better results.

Structured JSON

Convert resume and job description into structured JSON.

Data Generation

Generate skills, experience, and a matching score.

SQLite Integration

Send processed data to SQLite using.

Ranking System

Support a ranking system with clean and organized data.

Thank You !
